1. Begin by removing the butterfly discs from the bag. Then, take the straps on the back of the cushion and loop them through the butterfly discs.

2. Stretch the back strap out and slide over the headrest, pulling the seat cover down a bit. Set the strap in the middle of the seat for positioning and security.

3. Open the Velcro at the headrest to continue. Pull the seat cushion down to cover the backrest of the seat.

4. Once it is snugly, close the top by securing the Velcro pieces.

5. Push the butterfly discs through the seat crevice and position the discs upward against the back of the seats.

6. See above photo for example. NOTE: If there is a flap in the back of your seat, preventing you from doing this the same as above, you can attempt to unhook and then re-hook the flap OR you can push the discs through and set them under the seats.

7. For a more secure fit, remove the hooks from the bag to attach the front strap underneath the seat. WE SUGGEST WEARING PROTECTIVE EYEWEAR FOR THIS STEP! You may have to look underneath or feel around for a secure place to hook the strap.

8. Next, cover the headrest with the provided cover. Start from the side, with your hand touching the metal pole, and slide over sideways to cover.
